Durlok washers are designed for use with standard hex bolts \& nuts. Self-locking. Anti-vibration.

## Mechanical Properties

Material: SAE 4130 or equivalent alloy. Through Hardened.
Plating: Zinc flake coating (Delta Protekt(R)) Heat treatment: 47-52 HRC

## About Durlok Washers

Durlok ${ }^{\circledR}$ locking wedge washers when used with standard or high grade screws helps achieve self-locking properties. It utilizes tension instead of friction to secure bolted joints. Durlok washers come pre-assembled in pairs. They have wedge faces on the inside and radial teeth on the outside. They are designed such that the wedge angle is greater than the thread angle.

When the screw or the nut is tightened the radial teeth of Durlok washer locks itself onto the surface, allowing movement only across the wedge faces. During vibration, even a smallest turn of the screw causes an increase in pre-load force due to the wedge effect and the screw locks itself.

Thus the screw will not loosen or unscrew, even under severe jarring \& vibration. Durlok washers are re-usable with locking ability maintained.

Wedge Angle > Thread Angle
